

The Problem

Cleaning contractors have the challenging task of keeping a site clean, at a price & all the time. This client took over the cleaning for a large retail market site & had to lift the clean of the site MASSIVELY.

They needed to sweep & scrub internal areas, loading bays & local footpaths. All in an inner city Melbourne area with high pedestrian flow.

The Solution

Sweepmaster B980R battery powered ride on sweeper with twin side brushes, 24volt sperate Vacuum, & Conditional Road registration was supplied.

Twin side brushes gives broader coverage plus allows left or right side sweep focus. Add in the extra Vac (nicknamed R2D2) that allows for on board vacuuming under outdoor seathing & benches.

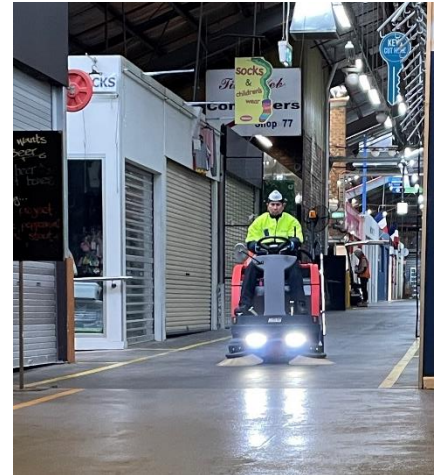

The local is a local icon – so they need to clean the footpaths where there is eatery areas & seating for shoppers.

The compact size with twin easy reach hoppers makes the emptying of the collected waste safe & simple.

Conditional registration has Mirror, indictaors, side & brake lights with a pole mounted strobe, & Number plate!

The Benefits

- Maximum uptime with local servicing
- Centre management EXTREMELY happy with the clean level provided
- Contractor has other sites on line to roll out the solution – and to extend current contracts
- Operators “fight” each other for the task of sweeping the outdoor areas as it is “fun” to drive
