

# Application Snapshot

## Industry – Transport yard

### The Problem

Large transport yards are open to elements, allowing dust, rubbish and debris to roll around and get in the way. The dust can get on the product or pallets being shipped, and is not good for equipment, customer confidence or staff morale!

Being a country yard, it has super fine dust that has the ability to get everywhere. They service a number of food processing clients – so a clean yard is CRUCIAL to their operation.

### The Solution

To cover the ground quickly, yet effectively site opted for a Hako Powerboss Atlas forward dump sweeper.

With LPG fueled forklifts on site a Gas powered unit was simple to slot into their machine service fleet.

With a 1625mm sweep path, covering the large hardstand areas was done with little down time. Operators have found the controls simple to use – and not hard to understand.

The large front mounted hopper allows them to easily empty into strategically placed mini hoppers (or straight to the main bin) when they need to.

### The Benefits

- Less dust on site = cleaner equipment
- Clean client product = as there is less dust inside warehouse areas
- Staff happy to use the unit = better productivity
